                     were amplified and each carried out to a different
cycle

was
                     placed on ice immediately after the designated
number of
                     cycles completed to arrest the reaction. 10  l of
product
                     from each reaction was analyzed using agarose gel
                     electrophoresis. An aliquot of each product was
serially
                     diluted 25 000-, 100 000- and 400 000-fold in water.
An

served as
